Testing Engineer

About me

Knowledge on how to create electronic circuits using KiCad,DesignSpark,etc... analysis of signals using LTSpice, VHDL coding in Vivado, worked with Multisim/ultiboard, worked with Keil for embedded programming(mostly for STM-micro). Familiar with C/C++,JS, HTML,PHP. PLEASE CONTACT ME ONLY BY EMAIL THANK YOU.

Work experience

Debug Engineer · APLS APLINE · Millstreet Cork
March 2022 - September 2022 · 7 months

I was very lucky to be part of the engineering team at Alps Alpine in developing testing stations for mass production. Each product that is manufactured at the factory needs to be tested to find any faults in the product functionality before it gets in the hands of the costumer. As part of my tasks were to break down a new project that would be manufactured at the factory and prepare a program that would test as much functionality of the product as possible. Also set up the autonomous station and create a load board that would flash the devices and test them. They were really happy with my presence in the factory and if reference or feedback needed it can be provided.

Education: Higher

Technological University of Shannon
Graduated in: 2023
Faculty: Electronics Engineering with Computer Systems.
Speciality: Engineer
