I single-handedly developed a game using React Native and a CMS built with React and Next.js. I created a cross-platform mobile game that offers a smooth, engaging user experience on both iOS and Android. At the same time, I developed a robust, scalable CMS with Next.js and used Express.js for the back-end to handle server-side operations. This project involved seamless integration between the front-end and back-end, ensuring a cohesive and efficient application ecosystem.

Iunie 2022 - Septembrie 2024 · 2 ani 4 luni

I've worked extensively with Next.js, React Native, and Laravel. Using Next.js, I developed server-rendered React applications for optimal performance. With React Native, I built cross-platform mobile apps that provide a seamless experience on both iOS and Android. Additionally, I utilized Laravel to create robust and scalable back-end services, integrating them efficiently with front-end interfaces to build comprehensive full-stack applications.
