Product Designer

About me

I am a Product UX/UI Designer with 6 years of experience in design, including 4 years working on mobile products. I design applications from scratch to release, conduct UX research, and analyze user behavior to improve user flows and usage scenarios. I am driven by creating interfaces that combine aesthetics with functionality and make users' lives easier.

Work experience

Product Designer · UAPP · Kyiv

January 2022 - Present · 4 years 1 month

Worked on three mobile applications: created new products from scratch and led redesigns of existing ones. Developed user flows, wireframes (low-fidelity), prototypes, and interactive solutions. Conducted a full cycle of UX research, including in-depth interviews, usability testing, and surveys. Designed and implemented design systems for each product. Closely collaborated with developers to support design implementation. Coordinated other designers on the team by conducting design reviews and mentoring. Achievements: Launched one new mobile application from scratch — from UX research to final UI design and handoff to development. Optimized key user scenarios, which improved onboarding and reduced time to complete core actions. Initiated and implemented a shared design system that reduced development time for new features and improved visual consistency across products. Created an efficient framework for design reviews within the team, improving design quality and reducing the number of developer-side revisions.

Skills: Figma, Ux, Ui, Ios guidelines, Material Design, Product Design

Web Designer · Bioniq · Kyiv

June 2021 - January 2022 · 8 months
