Java Developer

Despre mine

5 years ago I began to get acquainted with the world of IT at the university and tried myself in different directions. As a result, I believe that I have a versatile, albeit shallow, experience in various fields. From testing to ML and game development.

Since 2019I have chosen the path of Java web developer.

I have worked with both monoliths and microservice architectures. I love solving complex and unusual problems.

I am attracted by everything related to natural sciences. So if your company is from this area or is somehow connected with it, this is a plus for me.

I am friendly and open to communication.

Java

Spring Framework

PostgreSQL

ClickHouse

GRPC

Linux

docker

AWS

Unit Tests

Integration Tests

Nginx

Pipelines

Jenkins

Liquibase

flyway

etc
