About me

I build web applications using Laravel and JavaScript with a focus on clean backend logic and responsive user interfaces. My projects include REST API development, form processing, filtering, and drag-and-drop functionality. I understand full-stack architecture and work confidently with databases. At Pharmbills, I was involved in business process automation and worked closely with the IT team to improve internal systems. I value practical solutions, stable code, and clear project structure.

Work experience

PHP Developer · Freelance · Chișinău
May 2023 - Present · 2 years 4 months

Developed Laravel-based applications for small businesses
Created a task management SPA with AJAX CRUD and filtering
