QA Software Engineer

About me

I am a QA Fullstack Engineer with 5+ years of experience in manual and automated testing, including API, web, and microservices testing. I have strong skills in Python, PHP, and I have built custom testing tools to improve test efficiency and coverage.

My professional background includes work in universities, scientific laboratories, and R&D departments, where I contributed to the development of high-load systems and fast time-to-market solutions. I am experienced with Selenium, Postman, Codeception, and familiar with CI/CD pipelines, Agile/Scrum methodologies, and collaborative project management tools like JIRA.

I am passionate about information technology, automation, and the role of QA in business transformation. I am fluent in English and Czech, and I enjoy sharing knowledge through educational content, including YouTube channels on programming fundamentals.

My career goal is to reach the Senior QA Fullstack Engineer level within the next two years, applying my skills in test automation, API testing, and fullstack QA to deliver high-quality software.

Work experience

Middle QA Engineer · Bronirui Online · Krasnodar
June 2024 - Present · 1 year 4 months
